THE IMPACT OF ACADEMIC LIBRARIES IN ENHANCING INSTITUTIONAL NIRF RANKING: A STUDY

Ramswaroop Ahirwar[1], Manu T.R.[2] & Nipul Shihora[3]
[1 & 3]Project Associate –LS, INFLIBNET Center Gandhinagar
[2]Research Scholar, SLISc, Central University Gandhinagar

Abstract: *The aim of this paper is to highlight the role of the library in enhancing institutional NIRF ranking and focuses on the main role of the libraries and information center practices and services in support of NIRF ranking. This paper points out the impact of various library services including Management of Library and Information Services, Collection and Services Provided to Users, Extent of the use of services and Best practices etc. to perform the major role in NIRF ranking. The modern libraries are extended the library services to maintain the research quality and enhance the publications of an institute. The paper will also present the library best practices that one library can adapt to the regular library services to contribute the NIRF ranking of the institutions.*

Keywords: Library services, institutional ranking, NIRF, library impact.

1. INTRODUCTION:

Since the libraries are contributing major role to the institutions in research activities and growth of the students. Especially libraries are increasing structural development, innovations of the technologies, and focused on scholarly communications, higher education pedagogies and data management, are affecting user expectations in present environments and libraries need growth in information services and new resources. At the present era libraries are developing new initiatives with core activities fields such as research development, collection developments and instructions.

Ranking of institutions of higher education has become a benchmark with the increasing globalization of higher education. The Ministry of Human Resources Development, Government of India has introduced a ranking mechanism called National Institutional Ranking Framework (NIRF) is a methodology to rank all institutions of higher education in India and indicating the relative quality of Indian academic institutions and for improving the quality of higher education. The Indian Institutes of higher education needed of infusion of the value, qualities, and clearness on the approach of building universal classes learning and educational institutes in the Indian structure and environment. The new scales of value, qualities want to be well-defined to support the whole system to exchange on the qualities scale.

Olvia Crosby described Libraries as "information experts in the information age". Specific duties of the Libraries vary depending on the size and type of library. Most Libraries spent their working time in the public services with the public, frequently reference services and service to adults and children's; research and reference services help to the peoples those doing research, and electronic resources providing to the research peoples; technical services working with databases subscriptions and other tools and guide the cataloging and physically process of the new resources and materials and electronic resources Libraries manage the electronic databases which libraries license from the other vendors.

Figure: Institutional Quality Indicators (Michael 2005, 368)

The primary responsibility of the library is to collecting the information, preserving, describing and disseminating the information and organizing the intellectual property through the library classification and the cataloguing codes. Libraries are platform to develop the institutional reputation and assets of institute. The role of the Library in the present scenario is to acquire the information, provide access to and protection carriers of knowledge and information in different-different formats and to give the instruction or guidance for the consumption of the collection to which users have access to the libraries are about the conservation, providing and used recorded knowledge in whatsoever from it can come.

2. THE OBJECTIVE OF THE STUDY:

The objectives of this paper fixed in regard to impact of libraries and library services to enhance in institutional ranking. The major objectives are:

- To describe the impact and role of libraries
- To identify the various library services
- To frame the best library services and activities

3. ACADEMIC INSTITUTIONAL RANKING:

Globally, a number of mechanisms are available for ranking academic institutes. Among them, most popular are Academic Ranking of World Universities (Shanghai Jiao Tong University Ranking), Business School Rankings, Center for World University Rankings (CWUR), CHE Ranking (Center for Higher Education), CWTS Leiden Ranking, IREG Observatory on Academic Ranking and Excellence, Performance Ranking of Scientific Papers for World Universities (Higher Education Evaluation and Accreditation Council of Taiwan), QS World University Rankings, Ranking Web of Universities, SCImago Institutions Rankings, Times Higher Education World University Rankings, UI GreenMetric World University Ranking University Ranking by Academic Performance, URAP Rankings and Ranking Web of Universities. Most of these followed the similar criteria such as quality of education, teaching, research performance, citation, international collaboration, academic reputation, faculty/student ratio, international faculty and students' ratio etc.

In India, a number of organizations like India Today, Outlook India, Times Engineering survey (Times Group), GHRDC B-School Survey has started to ranking the universities, institutes and collages within India. In 1994, University Grant Commission establishes the National Assessment and Accreditation Council (NAAC) which is responsible for is responsible for evaluating and accrediting Indian institutions of higher education and academic departments in India and assign the Grade based on their curricular aspects, teaching-learning and evaluation, research, innovations and extension, infrastructure and learning resources, student support and progression, governance, leadership and management, institutional values and best practices.

4. NATIONAL INSTITUTIONAL RANKING FRAMEWORK (NIRF):

The NIRF is the best agency introduced by MHRD government of India on 29th September 2015. Its aim is to rank institutions (institute, universities and colleges) across the country. NIRF rank institution by discipline-wise such as overall, universities, engineering, colleges, management, pharmacy, medical, architecture and law related institutions in India. Through this practice every institution are making efforts for good quality of education and better performance.

The following parameters and sub-parameters are using for the National Institutional Ranking Framework (NIRF) set up by core committee for evaluating and clarify the quality of the educations of an academic institute, university and colleges;

5. PARAMETERS:

1. **Teaching, Learning & Resources (TLR)** includes student strength including doctoral students, the faculty-student ratio with emphasis on permanent faculty (FSR), combined statistics for faculty with Ph.D. (or equivalent) and experience (FQE), financial resources and their utilization (FRU).
2. **Research and Professional Practice (RP)** includes combined statistics for publications (PU), combined statistics for quality of publications (QP), IPR and patents: filed, published, granted and licensed (IPR), the footprint of projects and professional practice and executive development programs (FPPP).
3. **Graduation Outcomes (GO)** includes combined percentages for placement, higher studies, and entrepreneurship (GPHE), statistics for university examinations (GUE), median salary, and statistics for graduating students admitted into top universities (GTOP), and statistics for the number of Ph.D. students graduated (GPHD).
4. **Outreach and Inclusivity (OI)** includes percent students from other states/countries (Region Diversity RD), the percentage of women, economically and socially challenged students (ESCS), facilities for physically challenged students (PCS).
5. **Perception** has peer perception- employers and research investors (PREMP) and peer perception-academics (PRACD).

6. IMPACT AND ROLE OF LIBRARIES AND SERVICES:

Library have been contributing the institute learning and research activities in various ways, here presents the major impact and role of libraries and their services to which are directly and indirectly help to develop the NIRF ranking in India.

6.1 MANAGEMENT OF LIBRARY AND INFORMATION SERVICES:

- **Maintenance of library statistics**: every library needs to maintain their statistics on the user, visitor, resources use, the daily transaction of the materials, purchasing materials etc. to provide the output of the library to the institutions.
- **BiblioMetrics**: this is a major part of the library and information resource centers. It is a quantitative evaluation metrics of publication patterns and one of the measurements to knowing institutions outcome. Many LIS professional has the keen knowledge of bibliometrics, and that helps to create an actual image of institutions. Thus institutions get chance to improve their-self.

- **Collection**: generally library cannot survive without collection, which is most important to any library of the institution. The collection should be rich and based on user requirements. It includes physical and electronic resources.
- **Student and faculty Collaboration Centre:** the collaboration centers are one of the parts of the library where users can interact with each other. Here students and faculties of the institutes can communicate and discuss.
- **The number of days the Library is kept open**: Library should keep open full week morning 8 O'clock to maximum 10 pm O'clock for all users then they can use the library before and after teaching period also.
- **Working Hours**: We have to manage staff working hours in morning and afternoon shift, therefore, staff will work on their time.
- **Library Advisory Committee**: Every library should have an advisory committee for collect and share the ideas with committee members for development and enhancing new services and technologies in the library.
- **Infrastructure of the Library**: the infrastructure of the library is very important to the users; it should be in central place of the institute. It should have sufficient space to make all section of the library for operational work and to provide the services.
- **ICT Infrastructure**: the library should have good ICT infrastructure to provide efficient services based on the internet to the users. It includes library automation, digitization, online catalog and other electronic resources.
- **Budget:** every library analyzed and kept statistical data on their annual expenditure which is also included in the ranking framework as resource uses and utilization. Therefore, it is necessary to improve every year and helps the little bit to the performance of the institutions.

6.2 IMPROVING INSTITUTIONS RESEARCH IMPACT :

- **Research Support Centre service**: It is a single point in the library to promote the research on research impact, orientation on scholarly communication, publications etc. where some of the libraries and learning resource centers are providing the services and making efforts on it. It's also includes the services like tracking research output: (Article, conference paper, patent), trainings and awareness on publication cycle, how to select the good journal, use to scholarly databases like Scopus and Web of Science.
- **Institutional repository role**: Digital repositories are responsible for collecting, organizing, preserving and providing access to, and promoting dissemination of the intellectual (scholarly) output of the Institute. It helps to increase the access, visibility of research output.
- **Measuring impact:** Library shows the major impact in the measuring the research impact of the institute. To now the citation impact of research, libraries have been conducting the studies like citation analysis, reference analysis, bibliometric which help to find the quality of research. Libraries are helping with use of citation software tools (Zetero, EndNote, and Mendeley) to build and organize bibliographies and about the citing sources within the body of your text, that you took words, ideas, figures, images, etc. from another place.
- **Avoiding plagiarism:** Plagiarism occurs when research borrow another's words (or ideas) and do not acknowledge that you have done so. In this culture, libraries play the major role in avoiding plagiarism through right acknowledgement, summary, paraphrasing, quotation etc.
- **Data Management**: Libraries provide the guidelines to organize personal as well as research content with content management tools like Endnote, Zotero, Mendeley etc. libraries helps in choose tools for organizing PDFs, notes, and other files while working solo or in a group. For a lot of tasks, there's no one perfect tool out there, but there are some workarounds that can make your life easier.

7. CONCLUSION:

The methodology used in most global and domestic institutional rankings pays most attention to research and teaching activities, and only a few methods integrate other variables such as services and facilities of the academic libraries. However libraries have significant contribution to the institute research and teaching activities and further library professionals in many places acting like nodal offices between national ranking agencies and institutes. Academic libraries are founded especially for learning, teaching, research and community development initiatives.

Libraries have extended their users with Information literacy programs, communicating of current awareness to different user groups, creation of digital repositories, establishment of Central Reference Library for the use of constituent, developing linkage with the functional units of the universities such as information center, computer center, student welfare directorate/training & placement cell, conducting exhibitions/demonstrations/lectures on current issues, Development of electronic environment on the campus and encouragement to e-deliveries, Building a Network of College Libraries under the aegis of the University, Initiatives for research projects/ turnkey projects from the library etc. make the major impact in the NIRF ranking.

About Authors:

	Mr. Ramswaroop Ahirwar is working as Project Officer- LS (previously Project Associate-LS) at INFLIBNET Centre, Gandhinagar. He has contributed in various projects i.e. NIRF, ePGP Pathshala, Swayam Prabha and guided during the SOUL training program. He has completed Master of Library and Information Science from Dr. Harisingh Gour University Sagar M.P. He has also qualified CBSE-UGC NET in the 2017. He has also worked with PRL Ahmedabad and IIT Gandhinagar. **E-mail**: ramswaroopvr.22@gmail.com | **M**: 8141559401
	Mr. Manu T R is a doctoral research student at School of Library and Information Science, Central University of Gujarat, Gandhinagar Gujarat. He has received his Masters in Library and Information Science from University of Mysuru. He has worked with prestigious organizations like IIT Gandhinagar and Adani Institute of Infrastructure, Ahmedabad.
	Nipul G. Shihora is working as a Project Officer-LS at INFLIBNET Centre, Gandhinagar. Prior to this he has worked with IIT Bhubaneswar and IIT Gandhinagar. He has completed his Master degree in Library and Information Science from Sardar Patel University, Vallabh Vidyanagar and Bachelor in Commerce from Saurashtra University, Rajkot. Recently he has also cleared UGC NET in 2018. He has more than 5+ years of experience in Library and Information Science profession. He contribute as a technical support resource person during various workshop and training at INFLIBNET Centre. He is also a Life Member of ILA, India and ADINET, Ahmedabad.
